Summary

I am a researcher with a background in **Graph Mining** and **Machine Learning**. I have developed various algorithms based on statistical analysis for **Subgraph Querying** in large complex graphs. Some of the many areas that can benefit from the querying of subgraph structures are **information extraction**, **recommendation systems**, **disease diagnostics**, **fraud detection** are. I am intersted in developing effective and efficient algorithms for analyzing complex data structures using state-of-the-art machine learning techniques.
