## SUMMARY

I am a researcher with an interest in Graphs. I have developed various algorithms based on statistical analysis for **Subgraph Querying** in large complex graphs. Some of the many areas that can benefit from the querying of subgraph structures are information extraction, recommendation systems, disease diagnostics, fraud detection. During my post-doc, I worked on **HyGraphs**, where as a team we explored development of a novel data model combining property graphs and time series data models, with an aim to provide a single platform for seamless, intuitive and efficient processing of large scale datasets which are dynamic in nature.
